Summary

Atherosclerosis	122.4 mm ³ Total Plaque (0.3 mm ³ Low-Density - Non-Calcified, 118.2 mm ³ Non-Calcified, 3.9 mm ³ Calcified)
Stenosis	1 Mild (pRCA); 8 Minimal (pRCA, mRCA, dRCA, pLAD, mLAD, D1)
Dominance	Right-Dominant
Exclusions*	None (100% of coronary arteries ≥ 1.5mm in diameter were evaluated)

Atherosclerosis

Territory	Plaque Volume (mm ³)				Percent Atheroma Volume
	TOTAL	Low-Density - Non-Calcified	Non-Calcified	Calcified	
RCA	66.1	0	64.8	1.3	4.3%
LM+LAD	56.3	0.3	53.4	2.6	6.5%
Cx	0	0	0	0	0%
TOTAL	122.4	0.3	118.2	3.9	4.3%

Stenosis

Severe ≥70% or ≥50% LM only	0	Moderate 50-69%	0	Mild 25-49%	1	Minimal 1-24%	8

Learn more about this Cleerly analysis and Coronary Artery Disease (CAD)
www.cleerlyhealth.com/learn

Lesion details are included for lesions with a stenosis ≥ 25%

Cleerly LABS is an interactive tool for viewing and analyzing CCTA data to assess CAD or suspected CAD based on the presence and extent of coronary plaques (i.e., atherosclerosis) and stenosis.

Disclaimer: This report provided by Cleerly LABS does not provide data interpretation other than presence and extent of coronary plaques and degree of stenosis. This report should not be treated or used as a final diagnosis. Customer alone shall be responsible for evaluating the results, making any diagnosis, including but not limited to insertion of a CAD-RADS score to this report, and recommending any care or treatment to the patient, taking into account all relevant information, including customer independent review and interpretation of the source images. Certain views in this report may make use of interpolated data, which may give the appearance of healthy tissue in situations where pathology that is near or smaller than the screening resolution may be present. Cleerly shall not be liable for any decisions made for treatment recommended (or not recommended) by customer based on the report results, and customer agrees to indemnify and hold harmless Cleerly from any and all claims arising from or related to such decisions.
